Haozheng Lin

Adress:	Lillweg 13, 80939 Munich
Phone:	+49 1625646803
E-Mail:	linhaozheng@yahoo.com
Language:	German and English
Portfolio:	https://heizie.github.io
Github:	https://github.com/heizie/example_code

Work Experience

2018.10 – 2020.10

Student trainee with Bleenco GmbH

Main Task:

1. Participated in the PPE wear monitoring project, contributed to development focuses
2. Reproduced or modify classical Computer Vision (Deep-Learning-based) implementations and encapsulated them in a Docker container

Independent Project:

1. Developed an annotation tool for easing workload via using mobile devices
2. A based on classical Computer-Vision methods

Education

2018.09 – 2021.10

Master in Mechanical Engineering
(Control System and Computer Vision)
Technische Universität München

2014.09 – 2018.09

Bachelor in Mechanical Engineering
(Electromobility)
Technische Universität Bergakademie Freiberg

2010.09 – 2014.08

Bachelor in German Studies
Zengcheng South China Normal University

Project Experience

2021.04 – 2021.10

Master's Thesis: Instance Segmentation for Application to Deformable Linear Objects (**Note: 1,3**)

1. Developed anchor relevant modules for 4-dimensional RoI Transformer from scratch

2. Building assumption models according to the failure cases and developed improvements connect to the scenario
3. Designed and managed dataset; Fast implementation and failure analysis with multiple state-of-the-arts as the baseline
4. Pytorch based Detectron 2 and MMDetection are used

2020.04 – 2020.11

Semester Thesis: Image-based tracking of instruments of a laparoscopic manipulator system

1. Developed a real-time U-Net-based for detecting the pose of the medical instruments
2. Accelerated the support-algorithms
3. Transformed the model to FP16-format with TensorRT, and loaded by C++ script
4. Speed optimization: from 8.7 fps to 44 fps
5. Accuracy improvement: 25% less pixel error and about 10% higher recall and precision
6. Experimented sensor fusion for a 3D-reconstruction
7. Tensorflow and TensorRT (C++) are used

2020.08

Lab course: Autonomous Applications (**Note: 1,7**)

1. ROS-based project
2. Trajectory following using PID and simulated Lidar data
3. Crash prevention via normal speed to the obstacles

Skills

Programming:	Python, C++, Matlab Tensorflow, Pytorch, MMDetection, Detectron 2, TensorRt Docker
Language:	German (fluent in spoken and written) English (fluent in spoken and written) Chinese
